

Amani Eco School Lombok: Nurturing Ecological & Cultivating Environmental Consciousness

During a site visit to Lombok, a picturesque island in central Indonesia, PAGE Indonesia project personnel from the UNDP Country Office Indonesia had the pleasure of meeting and engaging in discussions with the management team of Amani Eco School Lombok. We had the privilege of meeting Ms. Aisyah Odist, the co-founder of Amani Eco School Lombok.

Amani Eco School Lombok is an educational institution that integrates ecological and environmental education into its curriculum. The school aims to cultivate a new generation of environmentally conscious individuals who are equipped with the knowledge and skills to promote sustainable development including green and circular economy principles. Supported by PLN's Corporate Social Responsibility (CSR) program, Amani Eco School has become a hub for environmental learning and community engagement.

Key Initiatives of Amani Eco School Lombok

Environmental Education: The school incorporates lessons on sustainability, recycling, and conservation into the regular curriculum, ensuring that students understand the importance of protecting the environment from a young age.

Inclusivity: The school supports the development of inclusive education programs that cater to students with disabilities, ensuring that everyone has access to quality environmental education. This approach promotes equality and inclusiveness within the community.

Local Partnerships: Amani Eco School collaborates with local organizations and businesses to strengthen its environmental initiatives and expand its impact on the community.

Future green and circular generation

The initiatives at Amani Eco School Lombok align closely with the objectives of the Partnership for Action on Green Economy (PAGE) Indonesia. PAGE Indonesia aims to support the country's transition to a green economy by supporting evidence-based policy making that equally consider economic, social and environmental aspects, fostering sustainable development practices, promoting green learnings and environmental education, and encouraging inclusive growth.

"Amani Eco School's efforts in educating young minds about sustainability, engaging the community in ecological and environmental projects, and fostering inclusivity directly contribute to accelerate Indonesia's transition into a greener and more circular economy, making it an excellent example for similar educational institutions from across the archipelago", said Aisyah.

Amani Eco School Lombok stands as a model for integrating ecological and environmental consciousness into education. By combining theoretical knowledge with practical experience, the school not only equips students with the skills needed for sustainable development but also instills a deep sense of environmental stewardship. Through its comprehensive approach, Amani Eco School is making significant strides towards building a more sustainable and inclusive future for Lombok Island and beyond.
